Contents

Eliminating the guesswork ........................................... 1

Nitrogen
1. Set realistic yield goals ........................................... 6
2. Test the soil ......................................................... 7
3. Credit other nitrogen sources ................................. 11
4. Apply nitrogen in the spring .................................... 13
5. Use nitrification inhibitors when effective ............... 17

Scouting
6. Scout fields ......................................................... 20

Insecticides
7. Know the economic thresholds for insects ................. 28
8. Consider insect-resistant crop varieties .................... 31
9. Spot-treat insect infestations when possible ............. 34
10. Know how tillage affects insects ............................ 37
11. Know how crop rotation affects insects .................. 41
12. Adjust planting and harvesting dates to control insects 43
13. Conserve beneficial insects .................................. 47
14. Consider using biological insecticides .................... 54

Herbicides
15. Know the economic thresholds for weeds ............... 58
16. Fine-tune your weed-control program to reduce rates .. 63
17. Manage crops to compete aggressively with weeds .... 66
18. Don’t increase herbicide rates with conservation tillage 68
19. Band herbicides and cultivate ................................ 70
20. Control weeds with cover crops ............................ 74

Pesticide selection
21. Determine the organic-matter content of your soil ...... 78
22. Determine your soil’s potential for leaching .............. 82
23. Determine your pesticide’s potential for leaching ...... 83
24. Determine the soil-pesticide interaction rating .......... 87
25. Consider other critical pesticide qualities .......... 88

**Pesticide application**

26. Select the proper nozzle tips .................................. 90
27. Calibrate your sprayer ........................................ 93
28. Consider direct injection .................................... 97
29. Prevent backsiphoning ..................................... 99

**Pesticide disposal and storage**

30. Rinse chemical containers thoroughly .................... 102
31. Dispose of rinsed containers safely ....................... 104
32. Dispose of excess chemicals safely ....................... 106
33. Store agrichemicals safely ................................ 108
34. Prevent and clean up chemical spills .................... 111
35. Construct a rinse pad ....................................... 113

**Site conditions, wells, and septic systems**

36. Know your site conditions ................................ 120
37. Evaluate your well location ................................ 124
38. Make sure your well is constructed properly .......... 125
39. Seal abandoned wells ....................................... 131
40. Make sure your septic system operates correctly .... 132

**Water testing and treatment**

41. Test your water routinely .................................. 136
42. Test your water for coliform bacteria and nitrate .... 139
43. Test your water for pesticides ............................ 144
44. Know the signs of contaminants in drinking water ... 150
45. Select effective water-treatment methods ............... 152

**Miscellaneous**

46. Store livestock waste wisely ................................ 162
47. Have old, underground fuel storage tanks removed ... 167
48. Dispose of other hazardous waste safely ............... 170
49. Take precautions when irrigating ......................... 173
50. Take precautions when chemigating ..................... 177
