Contents

Making progress on the waterfront ........................................... 1

Managing surface cover
1. Distribute residue evenly at harvest .................................... 6

   The Great Terrain Robbery: The erosion process ..................... 9

2. Avoid fall tillage .............................................................. 11

   No-till boom continues ..................................................... 13

   Dean Sasse: Watching yields go up as tillage goes down ............ 16

3. Determine how your operations will affect residue cover ......... 18

   Conservation tillage reduces pesticide runoff—usually .......... 26

4. Estimate residue cover in the field .................................... 28

   Estimating erosion with RUSLE ........................................... 34

5. Adjust equipment to preserve residue .................................. 36

   No-till boosts soil tilth .................................................... 42

6. Plant a cover crop ............................................................. 46

7. Rotate crops ........................................................................ 50

8. Select vigorous perennial pasture species ............................ 53

9. Protect the soil with special-use annual forage crops .......... 58

10. Protect the soil with rotational grazing ............................... 62

11. Use no-till when renovating pasture ................................... 66

12. Manage timberland to protect soil ..................................... 68

    Harvesting trees: Key best management practices in wetland areas .... 71

Controlling the flow of water
13. Reduce soil compaction and increase infiltration ................. 74

14. Install grassed waterways ................................................. 78

15. Plant vegetative filter strips or make critical area plantings .... 85

    Constructed wetlands show promise as filter .................... 89

16. Farm on the contour .......................................................... 91

17. Use contour stripcropping and contour buffer strips ............ 95

18. Install terraces ............................................................... 100

19. Install grade control structures ......................................... 105

20. Install water and sediment control basins ......................... 109
21. Use diversions ........................................ 112
22. Install a farm pond ...................................... 114

_Ralph and Joyce Neill:
Managing land means managing water ........................ 117
23. Maintain your drainage system to protect surface water .... 119
24. Control streambank erosion with the willow-post method .... 122
25. Avoid channelization of streams and creeks ................. 127

**Managing nutrients effectively**

26. Set realistic yield goals ................................... 130
27. Monitor the level of nutrients ............................... 132

_Fertilizer philosophies: What's the difference?_ ................ 137
28. Credit other nitrogen sources ............................... 139
29. Select nitrogen fertilizers wisely ............................ 141
30. Apply nitrogen in the spring ............................... 145

_Broadcast, incorporate, or inject?_ ............................ 147
31. Apply fertilizer with a global positioning system ............ 148

_Arlen Ruestman: Cutting back with variable rates_ ............. 153

**Managing livestock waste effectively**

32. Keep livestock out of water .................................. 156

_Alternative water for cattle: A tempting option_ .............. 160
_Microscopic mischief makers reside in livestock waste_ ....... 161
33. Divert runoff water ........................................ 163

_Ken Gasper: Composting manure reduces odor, phosphorus problems_ ........ 165
34. Collect and store contaminated runoff ........................ 167

_What about semi-solid and solid manure storage?_ ............. 172
35. Install a vegetative filter—if appropriate .................... 175
36. Determine accurate manure application rates ................. 178
37. Calibrate manure application equipment ..................... 182
38. Apply manure wisely ....................................... 185

**Reducing insecticide use**

39. Scout fields for insects ..................................... 190

_Jim Wilkinson: Adding profit through scouting_ ............... 196
40. Base decisions on the economic thresholds for insects ..... 198
41. Use insect-resistant crop varieties .......................... 205
42. Use crop rotation and plant diversity to control insects .... 210
43. Spot-treat insect infestations when possible ............... 214
44. Conserve beneficial insects ............................... 218

Reducing herbicide use
45. Scout for weeds and know their economic thresholds .... 224
46. Fine-tune your weed control program
   to cut back on herbicides .................................. 230
   Berning family farms: Reduced rates, one step at a time .. 233
47. Manage crops to compete aggressively with weeds ....... 236
48. Don’t assume that no-till requires more herbicide ..... 238
49. Band herbicides and cultivate ............................ 243
50. Control weeds with cover crops ........................... 245

Selecting pesticides
51. Select the least-toxic pesticide ............................ 248
   Earthworms and pesticides: Consider toxicity levels .... 251
52. Determine your soil’s potential for runoff ................. 253
53. Determine your pesticide’s potential for runoff .......... 255
   Mark and Janice Hinze:
   Using software to select herbicides ........................ 260

Handling pesticides safely and efficiently
54. Calibrate your sprayer ....................................... 264
   How to measure ground speed ................................ 268
55. Consider direct injection and closed handling systems .... 270
   Jerry and Diane Nibarger:
   Targeting sprays: Just what the doctor ordered ........... 274
56. Observe setback zones ...................................... 276
57. Rinse and dispose of chemical containers safely ......... 281
58. Dispose of excess chemical safely ......................... 285
59. Construct a rinse pad ...................................... 287
60. Dispose of other farm waste safely ....................... 290

For more information ........................................... 295
